MEGANOVA™ – game rules

MEGANOVA™ is a tranquil, space-themed 6X6 video slot with a ‘clusters pay’ mechanic.

GAME RULES

- Wins are paid by clusters.
- A symbol is part of a cluster if it is horizontally or vertically adjacent to symbols of the same type. Eight or more high-paying symbols and ten or more low-paying symbols appearing in a cluster awards a win.
- Simultaneous wins from multiple clusters are added.
- The total bet per spin is set using the Bet Amount interface.
- A cluster win in currency is equal to the Bet Amount / 100, multiplied by the multiplier value shown in the Paytable.
- AUTOPLAY automatically plays the game for the selected number of rounds.

Return To Player (RTP): 96.41%

GAME FEATURES

MegaNova Wilds

- Substituting wilds appear randomly and transform into a group of four (2x2) which expand towards the center, stick and generate a respin.
- An additional respin will happen if additional (overlapping or not) wild symbols appear (to a maximum of three respins).
- Where expanded wilds overlap, they create a win multiplier that is applied to any clusters in which they are part of. These win multipliers are x2 or x3 the cluster payout that is defined in the Paytable, depending upon how many wilds overlap.
- Where overlapping wilds include more than one multiplier, the win as defined in the paytable is multiplied by each. For example, a win of 100 with multipliers X2, X2, X3, X3 would generate a win of 3600 ($100 \times 2 \times 2 \times 3 \times 3 = 3600$).
